Quote: "Ved at studere SCHRODERS bekjendte verk over logikkens algebra kom jeg til at hefte mig ved nogen problemer av noksaa generel natur, der hos ham ikke var fuldstændig løst, og som han derfor ogsaa opfordrer forskere til at give sig ikast med. Endel av disse er det lykkedes mig at løse, og jeg skal da her vise løsningen av det elementæreste av dem, nemlig spørsmaalet om konstitutionen av grupperne m. h. t. den identiske kalkuls 3 species. Desuten vil jeg tilføie endel betragtninger over de øvrige grupper, der kan konstrueres indenfor denne kalkul."*, pages 149–163, 1915.

Quote: "Die wichtigsten Ergebnisse in dieser Arbeit sind die folgenden: Erstens der allgemeine mengentheoretische Relativismus, den ich schon fruher bewiesen habe. Alle Begriffe und Satze einer Mengenlehre haben nur ihre Bedeutung relativ zu den Axiomen und*

konnen durch Ubergang von einem Bereich zu einem anderen ganzlich geandert werden; besonders bemerkenswert ist die Relativitat der Machtigkeitsbegriffe. Zweitens die damit verknüpfte Vermutung, dass es nicht moglich sein kann, die mathematischen Begriffe vollstandig zu charakterisieren. Drittens die Erkenntnis, dass eine sonst widerspruchslose Theorie auch widerspruchslos bleibt, wenn tertium-non-datur-Axiome oder Vertreteraxiome hinzugefugt werden; ebenso ist die Einfuhrung von nicht entscheidungsdefiniten Mengen und die Bildung von Durchschnitten und Vereinigungen, speziell oberen und unteren Grenzen von Punktmengen, ohne Widerspruch moglich. Anderseits konnen aber alle solchen formalen Erweiterungen der Mathematik gar kein Mittel geben zur Entscheidung von Problemen, welche ohne diese formulierbar sind.", page 49 pp., 1929.
